

Badu Eco Wise Filter(No more Backwashing)

The BADU Eco Wise range of Filters has all the features and quality that you as a water wise customer require and expect. The BADU Eco Wise range of filters can be used on pools or Spa's and is 100% recyclable.

For hygiene reason, if installed correctly the self-drainage feature ensures that all the water is drained out of the filter casing when cleaning and the front union loosened.

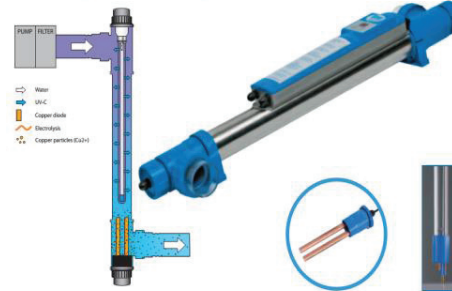

NO MORE BACKWASHING OF YOUR POOL

The perfect revolution for private swimming pools.

VERY EASY TO CLEAN AND RE-USE OR REPLACE WITH SPARE CARTRIDGE

SWIMMING POOL SOLUTIONS

Blue Lagoon UV-C Copper Ionizer

Replace most of your Chlorine usage with this UV Sterilizing Method

The Blue Lagoon UV Sterilizers are not a well-known method for sterilizing your pool's water in SA, but has been used for decades in the rest of the world.

Your chlorine usage can be reduced substantially and to such an extent, that a normal "floaty" with four or five chlorine tablets is sufficient enough to handle bacteria on the water edge.

A combination of two different types of UV Lights can be used, that will even keep on working while the power is off.

Grundfos Solar Swimming Pool Pump

The MGFlex Motor Is A New Solar Motor. It Is A 2-Pole Motor Of Frame Size 80* With Integrated Frequency Converter.

The Integrated Frequency Converter Enables MGFlex Motor To Run At High Efficiency In A Wide Speed Range.

This can easily be used in combination with the UV light of your choice, but specified to properly fit your pool's size.

The Grundfos Pump with 125W PV Panels will run the pump when the sun comes up and stop when the sun goes down.

No electricity!!! With the combination of the BADU Eco Wise Filter and the Grundfos pump you will have a clean swimming pool all year.

Solar Power

Facts about Solar Power

Earth receives approximately 3850 zettajoules (zJ) of solar energy per year from the sun. Converted this is

122 100 000 000 000 Watts.

In 2005, the world's total energy consumption was approximately 0.0567zJ. This converted into watts gives us 1 798 000 000 000 Watts.

This means that earth receives enough energy from the sun to cover our need about 67 000 times. That is a lot of wasted energy.

Advantages of Solar Power

Solar panels require little maintenance and as there are no moving parts, they can last a lifetime.

Solar panels do not emit any gasses which contribute to the greenhouse effect.

They are silent, producing no noise at all.

Sunlight is free, so once you have installed your solar system you are not going to have to pay to run them.

Solution for your swimming pool:

Use the following Combination:

1. BADU Eco Wise Cartridge Filter
2. Grundfos Solar Pump
3. Blue Lagoon UV Light
4. PV or Solar Panels

The BADU Eco Wise Filter saves you time, water and is 100% recyclable. No backwash. Easy to clean the Cartridge: Loosen the lid and bottom unions to drain the water, rinse the cartridge and assemble.

The Grundfos Pump will run the pump when the sun comes up and stop when the sun goes down.

The UV will protect you and your children against harmful masses of Chlorine.

The Solar Panels will keep on supplying power to your pump and UV lights, as long as the sun is SHINING...
